# Parameterized Algorithms, Exercise Sheet 5 

cms.cispa.saarland/paramalg_23

## Total Points: 50

Due: Tuesday, June 27, 2023

You are allowed to collaborate on the exercise sheets, but you have to write down a solution on your own, using your own words. Please indicate the names of your collaborators for each exercise you solve. Further, cite all external sources that you use (books, websites, research papers, etc.). You need to collect at least $50 \%$ of all points on exercise sheets to be admitted to the exam.
Please send your solutions directly to Barış (baris-can.esmer@cispa.de).

- Exercise 1

Let $G$ be an undirected graph, and let $s$ and $t$ be two vertices of $G$.
(a) What is the maximum number of important ( $s, t$ )-cuts of size exactly 1 in $G$ ?
(b) What is the maximum number of important $(s, t)$-cuts of size exactly 2 in $G$ ?
(c) What is the maximum number of important $(s, t)$-cuts of size at most 2 in $G$ ?

Justify your answers.

Let $G$ be an undirected graph, and let $s$ and $t$ be two vertices of $G$. Is it true that the number of important $(s, t)$-cuts of size at most $k$ is the same as the number of important $(t, s)$-cuts of size at most $k$ ? Justify your answer.

- Exercise 3 10 points $\qquad$
Give a parameterized reduction from Undirected Multiway Cut to Directed Multiway Cut that does not change the parameter. That is, given an instance ( $G, T, k$ ) of Undirected Multiway Cut, construct an equivalent instance ( $G^{\prime}, T^{\prime}, k$ ) of Directed Multiway Cut.
- Exercise 4 $\qquad$
Given an undirected graph $G$, a subset $T$ of vertices, and two integers $k$ and $\ell$, the Short Multiway Cut problem asks for a set $S$ of at most $k$ edges such that the graph $G-S$ contains no path of length at most $\ell$ between two distinct vertices of $T$. Show that the problem is FPT with combined parameters $k$ and $\ell$.
- Exercise 5 10 points $\qquad$
In the Max Leaf Subtree problem, given a graph $G$ and integer $k$ the goal is to find a sub-tree with at least $k$ leaves. Show that this problem does not admit a polynomial kernel. You may use the fact that Max Leaf Subtree is NP-complete.
